

My mission statement is to get a major in computer engineering and to achieve a stable job in the field. In the short term, I need to focus on college classes. I will take the classes that align with my major map as well as any that I have a personal interest in. I will also look for internship opportunities when I am ready for them to help me decide what I want to do. There are many opportunities in the computing role, so I want to focus on things that look interesting. Things that have interested me have been robotics, hardware, and even AI. I want to look for opportunities in college that relate to these things and see if I want to pursue them further. USC has lots of opportunities with specialization with AI and Cybersecurity which seem very interesting, so I hope to be able to look into this. My success criteria for the short term are to figure out more about my interests and do well in my classes so I can graduate. My medium-term goals are to go to graduate school to go beyond a bachelor's degree and to find an entry job to get experience. I will be able to specialize in an area of interest like hardware design or whatever I find interesting in college. My short-term goals will help me decide what want to take my masters in, and it will help me either continue internships or get an entry level job. My medium-term success criteria will be working to get a master's degree while also giving a focus on work experience while also pursuing personal interests as well. My long-term goals are to get a stable and well-paying job while leaving room for hobbies and personal life. With my short term and medium-term goals, they will give me the ability to get my master's degree and build my resume. With this I can search for a job that interests me and helps me keep a stable life. I hope to do something important in the engineering and computing field and make a difference with how machines will work and process. My success criteria for the long term are to make some sort of difference in the field and build a stable life and family.
